Auspicious Debuts: Electronics

By Jim Hannon

Crystal Cable's new Cube System is derived from the award-winning SAGA.

Crystal Cable Cube System

Although I saw a cut-away section of this ingenious integrated at the Munich Show, this was the first time I heard it. **Crystal Cable's** compact **Cube System** (\$16,995) has an output topology derived directly from **Siltech's** terrific **SAGA** "Light Drive" output stage and produces 200Wpc into 8 ohms. Its sophisticated controller provides a complete system control interface. With the Cube driving Crystal Cable's **Arabesque Minissimo** speakers via its **Dreamline Plus** cables, and a **Naim** digital front end, the sound was very refined and transparent.
